RECAP

Rural residents across La Araucanía depend on interurban buses to access services in Temuco, but schedules, stops, and fares are outdated or only available on paper.

The lack of a digital platform severely affects elderly people, students, and rural workers.

BusFinder, Our Solution

BusFinder, a mobile app that gives rural passengers real-time bus information, seat reservations, and transparent fares. All in one place.

Feedback Received

Tutor's Evaluation

Main Issues

- Align the heights and size of the buttons across screens
- Remove duplicate user data
- Remove multiple buttons on the same screen that perform the same function
- Improvements to purchase flow
- Reduction in the number of buttons on the ticket screen

Heuristic Evaluation

Main Issues

- Password inputs not displaying password visibility toggle
- Duplicate access to user profile
- "Close session" button blends with burger menu background
- Titles are not centered
- No option to add new payment method

Accessibility - Navigation & flow orientation

Flow Orientation - WCAG 2.4.6 Nielsen #1

3-step indicator with check icons on completed steps and a number on the active one. The user always knows where they are and how many steps remain.

Accessibility - Understanding without relying on color

WCAG 1.4.1 - Seat map legend

Available / Occupied / Selected states communicated through color + text label + seat number. State is never conveyed by color alone.

Selección de asientos
Seleccione los asientos que desea reservar.

☐ Disponible ☐ Ocupado ☒ Seleccionado

Accessibility - Error prevention & user control

WCAG 3.3.4 - Cancellation confirmation screen Nielsen #5

An intermediate screen shows the ticket summary plus an "Important" block with the refund policy before the user confirms. Irreversible actions are always preceded by a warning.
